How do Battery strings work in a parallel set?

Note: Energy from the battery is always sourced from the system of the lowest impedance. This is why the strongest battery string provides the power first and when it becomes depleted less than another string, that one then takes over. In a parallel set, they work in unison to balance each other out.

How do battery busbars work in a parallel set?

In a parallel set, they work in unison to balance each other out. If or when there are different strings involved, this idea works somewhat similar. This is the reason why people talk about making sure that the wiring of the battery busbars needs to be of equal impedance, which some refer to as length.
