80 kW solar home

Overview

What is a 80 kW solar system?

A 80 kW solar system ensures a steady energy supply for your enterprise and decreases or nullifies your electricity bills. We offer complete solar kits and our engineers picked the components so that they fit together nicely. Commercial and industrial scope installations are mostly ground-based.

How much energy does an 80kW Solar System produce per day?

For instance, the amount of energy that a 80kw solar system produce per day in summer California is going to be around 400-480 kWh. However, in New York the same installation is more likely to make only 250-350 kWh per day. The 80kw solar system size will depend on the PV modules that you'll choose.

Can you use an off-grid 80kW Solar System with batteries?

An off-grid 80kw solar system with batteries is a rare sight, but it can be used if you can't connect your system to power lines. Your building will rely only on solar panels during the day and on energy storage at night.

How many solar panels does a 80000 watt solar system need?

A 80000 watt solar system requires 130-200 solar panels. You can save space by choosing bifacial modules. They have an active rear side which gives up to 33% more production to the front side.

How long do solar panels last?

PV modules last for over 25 years and their ROI can reach 500%. The cost of a 80kw solar system will depend on configuration of your system, solar incentives that you'll be able to make use of, labor expenses, permits and papers from authorities that you'll have to get, and the panels themselves.
