Overview

How is Cambodia transforming its energy sector?

Cambodia is undergoing a significant transformation in its energy sector, balancing economic growth with sustainability. The government is implementing energy efficiency policies, expanding renewable energy sources, and modernizing infrastructure to reduce electricity costs and improve accessibility.

Why is Bess a good investment for Cambodia?

BESS can provide much needed grid stabilisation, reliability, decarbonisation while also reducing imported power. As battery storage demand and investment continues to grows, Cambodia is well-positioned to build a reliable, low cost, sustainable energy system for the future.

How adaptable is Cambodia's energy system?

Cambodia, through experience, has shown that its energy system is highly adaptable. Two decades ago, just 17% of its population had access to the electricity grid —today, it is 76%. According to the Energy Transition Index, Cambodia still has work to do on virtually every aspect of the energy transition.

Can solar power be used in Cambodia?

Renewable energy, particularly solar, holds great promise for Cambodia. However, the intermittent nature of solar energy benefits from robust storage solutions to store excess generation and provide power during low solar output periods, like the dry season.

Can Cambodia push for a greener energy future?

“Cambodia has an opportunity to push for a greener energy future by requesting investment specifically in clean technologies like solar, battery storage, and closed-loop systems of pumped storage hydropower,” she said.

So far, large-scale solar farm development has moved slowly in light of the country's immense amount of untapped shine.

How will electricity efficiency policy work in Cambodia?

The policy will be enforced through the Ministry of Economy and Finance, working alongside customs and tax departments to regulate imports. By setting clear electrical efficiency standards, Cambodia aims to minimize wasteful energy consumption, potentially eliminating the need for additional power plants.
