

# Afghanistan outdoor power supply purchase channels

**1mwh** (500kw/1mw)

AIR COOLING  
ENERGY STORAGE CONTAINER

## Overview

---

Does Afghanistan have a power transmission system?

Afghanistan has a limited power transmission infrastructure, and the network is still being developed and expanded. The transmission system is affected by history and natural topography and consists of distinct and isolated power systems and grids.

Should Afghanistan invest in power transmission infrastructure?

The government of Afghanistan should make considerable front-end investments in power transmission infrastructure and transit arrangements, sometimes without support from legally enforced strategic power purchases and formal transit indentures. In addition, these indentures are in USD but sold in Afghani to customers.

How many power systems are there in Afghanistan?

The Afghanistan power system is categorized into four different networks namely, North East Power System, South East Power System, Herat Zone System and Turkmenistan system which facilitates both internal and cross border interconnections with neighboring countries like Uzbekistan, Tajikistan, Iran and Turkmenistan.

What is Afghanistan doing to improve electricity supply?

These efforts have focused on expanding access to electricity, rehabilitating existing infrastructure, and promoting small-scale renewable energy sources. Afghanistan requires a substantial expansion of its transmission grid to connect power generation sources to demand centers across the country.

Why does Afghanistan need asynchronous power supply?

While this has helped Afghanistan grow its electricity sales over the last five years, asynchronous supplies limit the opportunities to interconnect and expand the power network in a rational way. Of the five main geographically

separate power networks in Afghanistan, the North Eastern Power System (NEPS) is the largest.

How much electricity does Afghanistan use?

The country's power consumption has been relatively low compared to many other nations. Of the estimated 7.5 billion kilowatt-hours (kWh) of electricity consumed in Afghanistan in 2019, 77.4% was from power imports: 35.3% from Uzbekistan, 12.3% from Turkmenistan, 30.7% from Tajikistan, and 21.7% from Iran.

### Product Information

#### Efficient Higher Revenue

- Max. Efficiency 97.5%
- Max. PV Input Voltage 1000V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Overvoltage
- Max. PV Input Current 15A, Compatible with High Power Modules

#### Intelligent Simple O&M

- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

#### Flexible Abundant Configuration

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. Current Inverter Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation

## **ADB approves \$110 million grant to enhance power supply in Afghanistan**

The project will allow Uzbek power into the Afghan grid under a 10-year power purchase and sales agreement signed in August 2020 by the Afghanistan and Uzbekistan ...
