

# **Are Middle East energy storage battery shipments large**

## Overview

---

Why are batteries becoming a preferred energy storage solution in the Middle East?

In the Middle East and African region, the demand for batteries has increased in the Middle East as a preferred energy storage solution primarily due to technological innovation and the reduction of battery costs.

Are lithium-ion batteries in demand in the Middle East & Africa?

In terms of technology, lithium-ion batteries are in huge demand in the Middle East and Africa Advance Energy Storage Market. These batteries are also being used for the storage of energy from renewable energy sources such as solar and wind in the region.

Is large-scale energy storage a viable option in the Middle East?

Until recently, large-scale energy storage was barely a consideration in the Middle East, where fossil fuels have long dominated power generation. With renewable energy projects expanding across the region, energy storage has started gaining traction.

Is energy storage gaining traction in the Middle East?

With renewable energy projects expanding across the region, energy storage has started gaining traction. Unlike Europe, North America, and Asia, where renewable energy and storage technologies are well-established, the Middle East remains in the early stages of development.

Is the MENA region a good place to invest in battery energy?

The MENA region is starting to witness a drastic increase in large-scale battery energy storage systems (“BESS”) projects, accompanying a soaring penetration of renewable energy. This has happened at a pace, which seems to have surprised many market analysts. In the past, forecasts for the MENA region showed a few GWh for the coming years at best.

How many companies are investing in battery energy storage systems?

Currently, only a few companies have invested in battery energy storage systems (BESS). However, this is expected to change significantly as the renewables sector in the region continues to grow. The region's installed renewable energy capacity reached 32 GW in 2023 and is expected to approach 40 GW by year-end.

## Are Middle East energy storage battery shipments large
