

# **Are there subsidies for installing communication base station energy storage in the United States**

## Overview

---

What are the different types of energy storage incentives?

In addition, there are other types of energy storage incentives that have been tried. For example, storage may be added to existing renewable programs, such as solar incentive programs, or be made eligible for market-based programs such as utility renewable portfolio standards (RPS).

How do state energy storage incentive programs differ?

- State energy storage incentive programs vary greatly in both program structures and incentive rates. The differences in structure—for example, rebates vs performance payments —make it very difficult to make apples-to-apples comparisons from state to state.
- It is difficult to establish consistent parallels between rates and outcomes.

Are state incentives necessary to increase distributed storage deployment?

- Despite all these variables, numerous studies as well as experience have shown that until energy markets mature, battery prices fall, and currently non-monetizable energy storage services become monetizable, state incentives are a necessary and critical key to increasing distributed storage deployment.

Are incentive rates good for energy storage?

For example, New York offers relatively low per-kWh incentive rates, but its programs are nearly fully subscribed. By contrast, Connecticut offers relatively high incentive rates but its residential program has been under-subscribed.

- Incentive rates alone do not convey a comprehensive economic story for energy storage in a state.

When will the BPU start a grid-connected incentive program?

The BPU expects to launch the grid-connected incentive program in 2026. Consumer protection policies establish rights for customers who install energy storage. Two states have adopted legislation guaranteeing protections to

customers who install energy storage.

How are battery energy storage resources developed?

The most significant battery energy storage resource development has occurred in states that have adopted some form of incentive for development, including through utility procurements, the adoption of favorable regulations, or the engagement of demonstration projects.
