

Australian flywheel energy storage manufacturers

Overview

Where is key energy installing a flywheel energy storage system?

Sydney company Key Energy has installed a three-phase flywheel energy storage system at a residence east of Perth, WA. The 8 kW / 32 kWh system was installed over two days in an above-ground enclosure, dramatically cutting the time needed to install the flywheel system.

What is flywheel technology?

Flywheel technology is a method of energy storage that uses the principles of rotational kinetic energy. A flywheel is a mechanical device that stores energy by spinning a rotor at very high speeds.

Why is flywheel energy storage a transformative choice?

This makes flywheel energy storage a transformative choice – whether at grid level or at smaller scale data centres or hospitals that need to ensure a reliable supply of energy at all times. Amber Kinetics have been extolling the virtues of flywheel energy storage technology since 2008.

Where are key energy flywheels made?

Key Energy's flywheels are sourced from US-headquartered company Amber Kinetics, though the rest of the battery system is believed to be manufactured in Australia. Could key energy be the first to use flywheel energy storage?

Key Energy is bringing flywheel energy storage to off-grid power markets and could be the first in the world to harness this commercially.

How does a flywheel store energy?

A flywheel is a mechanical device that stores energy by spinning a rotor at very high speeds. The basic concept involves converting electrical energy into rotational energy, storing it, and then converting it back into electrical energy when needed.
