

# **Australian photovoltaic modules and power generation films**

## Overview

---

What is the Australian photovoltaics Institute (apvi)?

About the APVI The Australian Photovoltaics Institute is a not-for-profit, member-based organisation which focuses on data analysis, independent and balanced information, and collaborative research. Our objective is to support the increased development and use of PV via research, analysis, and information.

What are the different types of photovoltaic products?

Product types: photovoltaic modules (PV modules, solar panels), solar water pumping systems, recreational vehicle power systems, marine power systems, telecommunications power systems, solar powered traffic lights, custom photovoltaic modules, remote home power systems, backup power systems, photovoltaic systems, and emergency preparedness suppl.

What are the benefits of thin layers of photovoltaic materials?

Thin layers of photovoltaic materials offer several distinct benefits, including adaptability, easy integration and reduced material usage. These panels owe their photovoltaic capabilities to their ability to absorb and convert sunlight into electricity.
