

# **Automatically cut off the power when outdoor power is in use**

## Overview

---

What happens when a power strip is turned off?

When the device in the master outlet is turned off, the other outlets cut their power to reduce standby power. Masterless: These power strips use a similar but inverse concept: when no devices plugged into the power strip are drawing power, the whole power strip cuts off all outlets.

How does a power strip work?

You'll choose one primary device (for example, a computer). When that device is switched off, the power strip will automatically cut electricity to other connected devices (like a printer, phone charger, or paper shredder). Masterless Power Strip And finally, there's the masterless power strip, sometimes known as a current-sensing power strip.

What is a smart power strip?

Smart power strips look similar to traditional power strips but come with built-in technology to detect and eliminate phantom power drain. They serve as a central connection point for multiple devices while intelligently managing power flow to each outlet. How Do Smart Power Strips Work?

.

Can smart power strips save the planet?

100 billion kilowatt-hours of annual wasted energy is equal to 80 million tons of carbon dioxide. If each of us used a smart power strip to help reduce our contributions, it would have a pretty major impact on the planet! Smart power strips also help extend the life of your electronic devices.

What is a master control power strip?

Master control: These power strips have a “master” outlet for a major device like a computer or television. When this is turned on, the power strip returns

power to peripheral devices plugged into other outlets. When the device in the master outlet is turned off, the other outlets cut their power to reduce standby power.

Should you turn off the power to your outdoor AC unit?

Listen out for any odd noises. Should you be experiencing any issues, reach out to the pros at Dallas Heating and Air Conditioning. In just a few seconds, you can turn off the power to your HVAC unit to stop the flow of power when installing or servicing your outdoor AC equipment.
