

Base station battery connection method

Overview

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

How do I set up a base station?

Set up the base station using either the tripod or T-bar mounting method. You must use an external radio antenna kit for the internal 450 MHz or 900 MHz radio. To avoid interference between the 900 MHz radio and GPRS transmissions, do not mount the external radio antenna within 1 m (3.3 ft) of the GSM antenna.

How does a base battery work?

This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners. The charge level of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include:

Cooling System: Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.

How do I set up a base station antenna?

Select a control point for the Base Position (the control point name will be used as the base station name) or select unknown position and enter the Base name. Select the Radio channel to transmit on, if required, and the base station Antenna type. Set the Antenna height and Correction type and then tap Accept to finish the setup.
