

Battery Energy Storage Cooperation Project

Overview

The innovative tolling agreement signed between Zelestra and BKW enables the delivery of one of Europe's largest battery energy storage systems (BESS), of up to 2 GWh, in the north of Italy. Construction is due to start in 2027, with full operations anticipated in 2028. Can battery storage reduce energy costs?

Battery storage can help reduce energy costs, enhance the use of renewable energy sources and reduce reliance on fossil fuels. BYD Energy Storage and Saudi Electricity Company (SEC) have signed a contract to deliver the world's largest grid-scale energy storage project totalling 12.5GWh.

What is BYD's battery energy storage project?

The 12.5 GWh battery energy storage project between BYD and Saudi Arabia is a game-changer. It will improve energy stability, boost renewable energy adoption, and support Saudi Arabia's Vision 2030 goals. Energy storage is key to the clean energy transition.

Why is battery storage important?

Battery storage projects play a vital role in enhancing grid stability and efficiency, making them essential for modern energy systems. Battery storage can help reduce energy costs, enhance the use of renewable energy sources and reduce reliance on fossil fuels.

What is a battery energy storage system?

A Battery Energy Storage System (BESS) is a technology that stores electricity for later use. It helps balance the power grid by storing excess energy when production is high and releasing it when demand rises. BESS is key for using renewable energy sources, like solar and wind. These sources don't produce power all the time.

How can battery energy storage help a grid?

Deploying Battery Energy Storage Systems to strengthen grids and enable

them to rapidly adopt high levels of least-cost, variable renewable energy. The future renewable energy mix will primarily derive from variable sources like solar and wind—except the sun doesn't always shine and the wind doesn't always blow.

How will BYD's new energy storage systems work?

The new energy storage systems will be installed across five locations in the Kingdom and fully integrated into the national power transmission network. The battery energy storage systems (BESS) provided by BYD will use its new-generation MC Cube-T ESS and its pioneering Cell-to-System (CTS) integration technology.
