

# **Cambodia power plant power generation**

## Overview

---

Energy in Cambodia covers the energy sources used in the country including nuclear, fossil fuels, traditional fuels, and hydro-power. Information on Cambodia's energy usage and the country's goals of development in terms of a green economy are also included.

Major sources of local power generation are hydro and coal, and minor sources include diesel, wood, and biomass. In addition to local power generation, Cambodia also buys electricity from neighboring countries, especially during the dry season.
