

Cambodia s communication base station grid-connected photovoltaic power generation efficiency

Overview

How many solar power plants are there in Cambodia?

Cambodia's grid-scale solar development started with just a 10 MW pilot in 2017. Today, nine solar power plants are connected to the national grid and are capable of producing up to 444 megawatts (MW), according to the Stimson Center's Mekong Infrastructure Tracker.

Does Cambodia have a solar generation regulation?

In 2018, Cambodia introduced a solar generation regulation, a new driver for the country's solar PV system development. Cambodia's grid-scale solar development started with just a 10 MW pilot in 2017.

How many energy projects are coming to Cambodia?

The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces.

Why is solar energy important in Cambodia?

Solar energy in Cambodia is becoming an increasingly important part of the country's long-term energy and climate change mitigation strategy. Solar power in Cambodia currently only makes up around 7% of the country's energy mix, significantly lagging behind hydropower and non-renewable sources.

How much does solar energy cost in Cambodia?

One of the promising traits of solar energy in Cambodia is its cost. The average electricity price for solar power is around USD 0.03 per kW, significantly lower than that of coal, which is USD 7.7 per kW.

How does electricity work in Cambodia?

In Cambodia, electricity generation is dominated by hydro power and coal power plants. Power outages are especially common in the dry season, making Cambodian businesses dependant on diesel back-up systems to ensure their electricity supply. Both, high electricity costs and power
