

Chad Smart Energy PV Site

Overview

Djermaya Solar Power Station (DSPS) is a planned 60 MW (80,000 hp) solar power plant in Chad. The solar farm is under development and is owned by a consortium comprising (a) Aldwych International Limited, a subsidiary of Anergi Group (working on behalf of InfraCo Africa) and (b) Smart Energies. The power.

The power plant is located southwest of the town of Djermaya, approximately 30 kilometres (19 mi), north of , the capital and largest city in the country. The project site measures about 100 hectares (250 acres), in the.

In July 2020, armed with a 25-year , the owners of D'jermaya Solar Company advertised for qualified contractors to bid for the .

There are three main objectives in the development of this solar farm. The first objective is to increase the grid supply of electricity in Chad. Secondly, Chad depends primarily on electricity derived from expensive -fired installations. DSPS.

The project has received partial funding from the , the , the Emerging Africa Infrastructure Fund and

Will a solar PV plant be a 'pioneering project' in Chad?

The European Investment Bank (EBI) described the solar PV plant as a “pioneering project” that “will help liberalise the energy sector, and mobile private investment in Chad.” It is calculated that the cost of electricity will be less than half the current cost of power following the project.

Where is Chad's first solar power plant located?

InnoVent has therefore decided to develop the country's first solar power plant, by implanting it in Abéché, the second largest city in Chad with 80,000 inhabitants, but which is not connected to the national electricity grid. The project's beginnings date back to the end of 2015.

Does PROPARCO finance Djermaya solar project in Chad?

In Chad, Proparco is participating in financing the Djermaya Solar project with EUR 9.3m. This first solar power plant in the country aims to improve access to electricity for thousands of people. The Djermaya Solar project has been developed by InfraCo Africa, via Anergi Africa Developments Ltd (AADL), with its partner Smart Energies.

Why did Innovent develop a solar power plant in Chad?

The other advantage would be the preservation of the environment, important in a semi-desert country like Chad. InnoVent has therefore decided to develop the country's first solar power plant, by implanting it in Abéché, the second largest city in Chad with 80,000 inhabitants, but which is not connected to the national electricity grid.

Does Chad have a hybrid energy system?

In this study, the hybrid energy systems are proposed for all the regions that are not yet electrified in Chad. The National Electricity Company (NEC) of Chad produces and distributes the electricity only in 7 of the 23 regions of Chad; meaning that 16 are un-electrified.

How a hybrid energy system can improve electricity access rate in Chad?

The renewable energy implementation with hybrid system design can significantly reduce greenhouse gas emissions and increase electricity access rate in Chad. The National Electricity Company generates electricity using only the diesel generators.
