

China-Europe Energy Storage Power Station Subsidy Distribution

Overview

Are energy subsidies necessary in China?

In China, the common practices of government energy price setting imply energy subsidies. For a transitional economy like China, some energy subsidies are justifiable, sometimes even necessary.

How much do China's end-use energy subsidies cost?

Table 3 indicates that in 2007, China's end-use energy subsidies amount to CNY 356.73 billion — roughly equivalent to 1.43% of GDP. IEA (2008) had estimated that China's energy consumption subsidies were about CNY 300 billion in 2007.

How does the European Union affect energy storage?

Simultaneously, the European Union has made regular revisions to top-level policies and power market regulations to promote large-scale energy storage development and provide favorable conditions for energy storage to participate in the power market on a greater scale, which is instructive for China.
