

China-Europe photovoltaic energy storage supplier

Overview

Are Chinese-manufactured solar panels putting up in European warehouses?

Chinese-manufactured solar photovoltaic (PV) panels are piling up in European warehouses, with Rystad Energy forecasting 100 GWdc of solar capacity in storage by the end of 2023.

How many Chinese solar modules are there in Europe?

There are currently over 40GW of Chinese-made solar modules in storage across Europe with a cumulative value of around €7 billion (US\$7.8 billion).

Will European solar panels keep up with the growth of imported solar panels?

These goals include a target for 30 GWdc of European manufacturing along the entire value chain by 2025 and 40% of installed solar PV being manufactured within the continent by 2030. Despite these ambitious goals, between 2019 and 2022, locally-made modules could not keep pace with the growth of imported panels.

How often does sinovoltaics publish a region-specific solar supply chain map?

Every four months, Sinovoltaics publishes region-specific solar supply chain maps for North America, Europe, Southeast Asia, and India, documenting the published plans of manufacturers operating in each region. It also publishes an annual transformer manufacturing map for Mainland China.

What services does sinovoltaics offer?

Sinovoltaics' services include quality assurance inspections, factory audits, Environmental, Social, and Governance (ESG) reports, and traceability audits for utility solar developers and investors.
