

# **Construction cost of 1MW of grid energy storage**

## Overview

---

While it's difficult to provide an exact price due to the factors mentioned above, industry estimates suggest a range of \$300 to \$600 per kWh for a 1 MW battery storage system. This translates to \$300,000 to \$600,000 per MWh or per MW for a system that can deliver its maximum power for one hour. How much does a 1 MW battery storage system cost?

Given the range of factors that influence the cost of a 1 MW battery storage system, it's difficult to provide a specific price. However, industry estimates suggest that the cost of a 1 MW lithium-ion battery storage system can range from \$300 to \$600 per kWh, depending on the factors mentioned above.

How much does gravity based energy storage cost?

Looking at 100 MW systems, at a 2-hour duration, gravity-based energy storage is estimated to be over \$1,100/kWh but drops to approximately \$200/kWh at 100 hours. Li-ion LFP offers the lowest installed cost (\$/kWh) for battery systems across many of the power capacity and energy duration combinations.

How much does a non-battery energy storage system cost?

Non-battery systems, on the other hand, range considerably more depending on duration. Looking at 100 MW systems, at a 2-hour duration, gravity-based energy storage is estimated to be over \$1,100/kWh but drops to approximately \$200/kWh at 100 hours.

How much energy does a brick-based storage system use?

For brick-based storage systems, cost and performance information was obtained for a single power output (10 MW) with two different energy outputs (40 and 2,40 MWh) (Terruzzin, 2021). From this information, costs were extrapolated for the various energy and power levels considered in this study by solving two linear equations.

How does energy storage impact the grid and transportation sectors?

Energy storage and its impact on the grid and transportation sectors have expanded globally in recent years as storage costs continue to fall and new opportunities are defined across a variety of industry sectors and applications.

Should energy storage be a grid asset?

Focus is placed on lithium ion and flow battery technologies; the former being the current market leader, the latter in the early stages of market adoption. Results of this analysis support the continued evaluation and potential deployment of energy storage as a grid asset.
