

Container power generation selection

Overview

What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300–3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

What is a containerized generator set?

The durable and robust Containerized Series generator sets are ideally suited for independent power producer (IPP), mining, oil and gas, or any project where harsh conditions, challenging environments and the demand for reliable, continuous remote power exist.

What is a generator container?

These containers are designed to protect the generator from external elements, ensuring secure operation in diverse environments. The generator sets within these containers can vary in size and capacity, making them suitable for a wide range of applications.

Why should you use a containerised generator set?

This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors. Additionally, the container offers increased security against theft or vandalism, making containerised generator sets suitable for applications where equipment safety is a concern.

What are the benefits of a single container power generation system?

The entire power generation system, including the generator, fuel tank, and control systems, is integrated into a single container. This portability is especially advantageous for industries that require power at multiple locations or for temporary projects such as construction sites, events, or disaster response operations.

What is a type 6 generator container?

Our Type 6 generator containers consist of two or three pre-assembled modules, depending on the engine type and the application. The overall package (gas engine, container, and auxiliary components) is available for 65, 70, 75 and 80 dB (A) in 10m (surface sound pressure level according to DIN 45635).

Container power generation selection

[Containerized Packaging - Phoenix Products](#)

No matter what your power demands and challenges are, Phoenix Products can package your generator in ISO containers up to 40 feet in length for generators sized up to 2500 kilowatts. ...
