

Containerized 5G base station

Overview

Can a containerized 5G central unit (CU) module migrate between two servers?

The contribution of this study is to present a proof-of-concept implementation that completes the live migration of a containerized 5G Central Unit (CU) module between two servers without causing permanent service disruption to the mobile user.

Does Kyocera have a 5G base station?

Kyocera Corporation (Kyoto, Japan; President: Hideo Tanimoto) today announced that it has officially begun the full-scale development of an AI-powered 5G virtualized base station, with plans to commercialize the technology. As digital transformation (DX) accelerates globally, 5G mobile networks have become a critical societal infrastructure.

Why should you choose Kyocera for 5G virtualized base stations?

Using AI, Kyocera's 5G virtualized base stations will enhance performance, reduce power consumption, and streamline both operations and maintenance. By offering these 5G virtualized base stations as an optimized solution to customers worldwide, Kyocera will support the advancement of 5G systems and help create a prosperous and connected society.

Is 5G a 'standalone' network?

A report published by the Global Mobile Suppliers Association in July 2023 shows that there has been significant progress in the development of 5G Standalone (5G SA) networks globally. According to the report, 115 operators in 52 countries and territories have invested in 5G SA networks through trials, deployments, or planned deployments.

What is ueransim 5G UE & ran (gnodeb)?

UERANSIM, the open-source state-of-the-art 5G UE and RAN (gNodeB)

implementation. It can be considered as a 5G mobile phone and a base station in basic terms. The project can be used for testing 5G Core Network and studying 5G System. Used OpenShift 4.7 with OVNKubernetes for the implementation, first we will be enabling SCTP for cNFs.

Why is containerization becoming a standard in back-end infrastructures?

Containerization has become the standard in back-end infrastructures because you don't need an entire virtual machine to run many different pieces of software and containerization makes it possible to provide a machine with as many pieces of software as you want without breaking anything.

Containerized 5G base station

Building an Open Source Containerized 5G SA Network through ...

Building an Open Source Containerized 5G SA Network through Docker and Kubernetes
