

Cost of flywheel energy storage

Overview

What is a flywheel energy storage system?

Flywheel energy storage systems (FESSs) are a promising alternative to electro-chemical batteries for short-duration support to the grid . Frequency regulation is the most common service a FESS can provide in the electricity network , .

Does a flywheel storage system need a bottom-up research?

However, almost no bottom-up research has been done, i.e., research that considers the technical parameters to size the components of a flywheel storage system, estimate cost parameters based on the design, and provide a probable distribution of the total investment cost and levelized cost of storage.

What is the power rating of a flywheel energy storage system?

Utility-scale energy storage systems for stationary applications typically have power ratings of 1 MW or more . The largest flywheel energy storage is in New York, USA by Beacon Power with a power rating of 20 MW and 15 min discharge duration .

How much does a steel rotor flywheel cost?

The steel rotor flywheel has a lower capital cost and levelized cost of storage. The costs of composite and steel rotor flywheels are \$190 and \$146/MWh, respectively. Flywheel energy storage systems are increasingly being considered as a promising alternative to electro-chemical batteries for short-duration utility applications.

What is the largest flywheel energy storage?

The largest flywheel energy storage is in New York, USA by Beacon Power with a power rating of 20 MW and 15 min discharge duration . Utility-scale flywheel storage is typically used for frequency regulation to maintain grid frequency

by matching electricity supply and demand for a short period, usually 15 min ,
.

How many flywheels are required?

The corresponding number of flywheels required was calculated to be 200 and 186 (see Table 1). The TIC comprises total equipment cost, miscellaneous items cost, construction and commissioning cost, and contingency cost. The TEC, which comprises the costs of different components of the system, alone contributes about 68% to the TIC.
