

Costa Rica s new outdoor power market

Overview

How can Costa Rica improve its energy supply?

Adaptive measures like diversifying energy sources and improving infrastructure are also underway. These efforts aim to ensure a stable energy supply while minimizing environmental impact. Despite current setbacks, Costa Rica continues to lead by example in the global shift toward clean energy.

What is the main source of electricity in Costa Rica?

Hydroelectric power is the most used source in Costa Rica, providing about 78% of the country's electricity. Thanks to its many rivers and high rainfall, hydroelectric plants are mostly found in the central and southern parts of the country. Wind energy is the second major source, making up about 10% of the power supply.

How is Costa Rica transforming its energy portfolio?

Costa Rica is taking bold steps to diversify its energy portfolio. The country is integrating wind, solar, and geothermal solutions to strengthen its power grid. These efforts aim to reduce reliance on any single source and ensure long-term sustainability.

How has eco-tourism impacted Costa Rica's economy?

This surge in eco-tourism has bolstered local businesses and, by extension, the overall economy. Costa Rica's renewable energy initiatives have played a pivotal role in stabilizing the national economy, which in turn has had a positive knock-on effect on the tourism sector.

Is solar energy a viable option in Costa Rica?

The government is encouraging more solar power use through various incentives. Geothermal energy, which uses heat from the earth, supplies about 10% of the energy. This type of energy is especially viable in Costa Rica

because of its volcanic areas, with plants near volcanoes like Miravalles and Rincon de la Vieja.

Does Costa Rica have a monopoly on electricity?

The Costa Rican Institute of Electricity (ICE) holds a monopoly over electricity distribution and generation in Costa Rica. There are some exceptions where other public institutions, private companies (Law #7200) and co-operatives are authorized by law to generate and sell electricity.
