

# **Courtyard Solar Onsite Energy Storage**

## Overview

---

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Can on-site storage be used alongside solar PV?

If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure upgrades, thus increasing the feasibility of larger on-site PV installations.

Can a combination of solar and storage reduce a customer's Bill?

For certain customers, the combination of solar plus storage can reduce a customer's bill by more than either solar or storage on their own. This is possible because: Solar reduces the amount of electricity drawn from the utility, but since solar power is not dispatchable, it is difficult to reduce the monthly peak and associated demand charges.

Who should oversee energy storage projects?

A qualified professional engineer or firm should always be contracted to oversee any energy storage project. This report was prepared as an account of work sponsored by an agency of the United States Government.

## Courtyard Solar Onsite Energy Storage

---

### How to Use Solar Energy to Generate Electricity in a Small Courtyard

Well, buckle up buttercup - with today's solar tech, that 10x10ft space might just become your personal power plant. Let's explore how to transform even the tiniest outdoor areas into clean ...
