

# **Cuba Wind Power Energy Storage System Manufacturing Plant**

## Overview

---

How is wind energy used in Cuba?

In Cuba, wind energy use is relatively new, beginning with small generators used to extract water from the wells for cattle ranches. Currently, there are three wind farms set up in Ciego de Ávila, Holguín and the Isla de la Juventud, and several places are being studied to set up new farms.

How can Cuba build a more resilient energy system?

Building a Cleaner, More Resilient Energy System in Cuba recommends numerous ways by which domestic policy in Cuba can prioritize working towards a more sustainable, resilient grid — especially by investing in the energy transition — and ways in which international cooperation can support these goals.

Is Cuba's energy infrastructure in a precarious state of aging and disrepair?

The report highlights the issue that not only is Cuba's energy infrastructure in a precarious state of aging and disrepair, but also that its entire energy system relies heavily on external aid and imported fossil fuels.

Should Cuba update its energy grid?

While small-scale, such renewable energy initiatives can reduce pressure on the energy grid and provide relief in especially vulnerable places. Due to rising temperatures and increasingly unreliable energy infrastructure, action to update Cuba's energy grid is urgently necessary.

How does Cuba rely on oil?

Cuba is dependent on fossil fuels for energy generation and relies on oil imports of crude and fuel oil from Venezuela and Russia, as well as floating power plants provided through an agreement with a Turkish business group.

## Cuba Wind Power Energy Storage System Manufacturing Plant

---

### CUBA TAKES UP HYDRO PLAN

The integration of pumped storage hydropower with solar and wind energy enhances grid resilience by providing a reliable mechanism for energy storage, managing the intermittency of ...
