

DC side of the inverter

Overview

The DC side of your system includes everything from the solar panels to the DC input of your inverter. Proper safety measures here are critical because DC faults can be particularly hazardous, sustaining arcs more readily than AC faults.

What are solar AC and DC disconnects and why do you need them?

A solar DC disconnect (or PV disconnect) shuts off the direct current (DC) power traveling from the solar panels to the inverter. DC disconnects are often built into the solar inverter.
