

Detailed solution for the Latvian factory energy storage system

Overview

Where is the first battery energy storage system in Latvia?

On November 1 Latvia's largest wind energy producer Utilitas Wind opened the first utility-scale battery energy storage battery system in Latvia with a total power of 10 MW and capacity of 20 MWh in Targale, Ventspils region.

Why do we need a battery system in Latvia?

The battery system is an essential infrastructure element for the security and stability of Latvia's energy supply. The batteries will work as modern accumulators for storing large volumes of energy, which will be important for ensuring energy balance once the Latvian electricity supply grid works in sync with the European grid."

Are new wind farms a good investment for Latvia's energy security?

I am pleased that the bar has been set high for developers of new wind farms, which also plays an important role in the context of Latvia's energy security," said Climate and Energy Minister of Latvia, Kaspars Melnis. Given the total investment in the project, the OP Corporate Bank provided loan financing.

When will infrastructure projects in Latvia be completed?

According to the original plan, all infrastructure projects in Latvia will be completed by the end of 2025, with the bulk of the work completed by February 2025, ensuring technical readiness for the safe and stable operation of the system in synchronisation mode. If playback doesn't begin shortly, try restarting your device.

Detailed solution for the Latvian factory energy storage system

The Future of Energy: Why Our New Battery Factory in Latvia is a ...

For the renewable energy sector, our energy storage systems offer a robust solution for integrating renewable energy sources into the grid. Our batteries are also ideal for consumer ...
