

Ecuador Data Center Communication BESS Power Station

Overview

Why do data centers need a Bess system?

This capability is crucial for energy-intensive environments like data centers, where the need for sustainable and reliable power grows. Using advanced energy management systems to improve efficiency, BESS helps mitigate energy losses from voltage mismatches between power grids and devices.

What is Bess & how does it work?

Using advanced energy management systems to improve efficiency, BESS helps mitigate energy losses from voltage mismatches between power grids and devices. The global energy storage market is expanding rapidly, with Wood MacKenzie recently estimating that it reached 159 GW/358 GWh at the end of 2024.

Should data centers embrace Bess technology?

Several key trends are pushing data centers to embrace BESS technology: With vast deployments of solar and wind energy growing greener energy globally, their intermittent supply and low inertia, however, creates grid stability challenges for grid operators.

Why should data center developers use EPC power's Bess solutions?

EPC Power's BESS solutions enables data center developers meet these challenges by providing: Peak Load Shaving: BESS can store excess energy during off-peak hours and release it during peak demand periods, reducing the strain on the local grid and lowering energy costs.

Why should a data center integrate Bess?

The combination of BESS with data centers is a powerful pairing that addresses multiple operational challenges—power reliability, cost control, and energy efficiency. By integrating BESS, data centers can: At Telkes, we specialize in providing comprehensive solutions that optimize your data center

operations.

What makes Bess attractive for data centers?

“Part of what makes BESS attractive for data centers is the increased flexibility and stability it can offer if leveraged well,” explains Howard Porter, energy-efficiency expert and market strategy board member at the International Electrotechnical Commission (IEC).
