

Efficiency of photovoltaic inverters in Lesotho

Overview

Does Lesotho have a good photovoltaic potential?

Concerning the photovoltaic potential, Lesotho presents a good potential countrywide, having values ranging from around 1600 kWh/kWp to 1750 kWh/kWp, with maxima in the highlands. The results also show that there are many promising areas for wind power exploitation.

How was the photovoltaic power potential map produced for Lesotho?

The photovoltaic power potential map for Lesotho was produced using WRF Sim2 hourly values of normal, direct and diffuse solar radiation, 2 m temperature, 10 m wind and albedo. As for the wind energy assessment, the use of an hourly model output allowed us to take into account diurnal variability of the involved physical quantities.

What is the best inclination for PV modules?

The best inclination of the modules, maximizing the annual energy production, was investigated by calculating PV fields for each of eleven β values, ranging from 27° to 37° with 1° step, being 1° accuracy more than sufficient, as stated by Huld et al. [49].

Efficiency of photovoltaic inverters in Lesotho

Commercial and Industrial ESS

Air Cooling / Liquid Cooling

- Budget Friendly Solution
- Renewable Energy Integration
- Modular Design for Flexible Expansion
