

# **Energy storage container production in Syria**

## Overview

---

How many refineries are there in Syria?

Syria currently has two active refineries located at Baniyas, with a production capacity of 120,000 b/d, and one at Homs, which has a production capacity of 107,100 b/d; the current state of the two refineries is uncertain given the destruction of war and the inability of Syria to reliably maintain the infrastructure over the years.

How did a fall in oil production affect the Syrian economy?

The fall in production devastated the Syrian economy since oil exports accounted for 25% of the country's GDP. Over the course of the thirteen-year Syrian civil war, Iran invested an estimated \$30-\$50 billion into bolstering Assad's regime.

How much oil does Syria produce a day?

Before the civil war began in 2011, Syria produced an average of 383,000 barrels per day (b/d) and 316 million cubic feet per day (Mmcf/d) of natural gas. In 2015, Syria had an estimated 2.5 billion barrels of proven reserves of oil.

## Energy storage container production in Syria
