

Equatorial Guinea s new energy storage ratio

Overview

How much energy does Equatorial Guinea use?

Electricity consumption in Equatorial Guinea in 2015 was 36 kilotonnes of oil equivalent (ktoe). The country produces all of the energy it consumes. As of 2012, renewable energy accounted for 29.2% of the final energy mix.

What are the different types of energy transformation in Equatorial Guinea?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Equatorial Guinea for 2022. Another important form of transformation is the generation of electricity.

What transformations are taking place in Equatorial Guinea in 2022?

No data for Equatorial Guinea for 2022. Another important form of transformation is the generation of electricity. Thermal power plants generate electricity by harnessing the heat of burning fuels or nuclear reactions – during which up to half of their energy content is lost.
