

# **Estonian Power Generation and Storage Group**

## Overview

---

It aims to enhance energy security and the stability of the power network, particularly in anticipation of Estonia's planned disconnection from the Russian energy system. The plant is expected to act as a significant energy storage unit, facilitating the integration of renewable energy into the grid.

[12]Overview Energy in Estonia has heavily depended on . and Estonia are two of the last countries in the world.

The National Energy and Climate Plan published in 2019 aims to reduce greenhouse gas emissions by 70% by 2030 and by 80% by 2050. Renewable energy must be at least 42%, with a target of 16 TWh in 2030. .

Amidst geopolitical tensions, Estonia took decisive action to reduce its reliance on Russian energy sources, particularly in response to Russia's invasion of Ukraine. Previously heavily dependent on Russian imports for.

According to the (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavil.

Electricity production in Estonia is largely dependent on fossil fuels. In 2007, more than 90% of power was generated from . The Estonian energy company owns the largest -fuelled power plant.

In February 2013, Estonia had a network of 165 fast chargers for electric cars (for a population of 1.3 million). This grew to 400 in 2022.

What is the Estonian energy sector development plan?

The Estonian Energy Sector Development Plan aims to ensure that energy supply remains affordable and accessible to consumers, that environmental impacts are acceptable and that it aligns with the long-term energy and climate policies of the European Union.

Where is Estonia's largest battery storage facility located?

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid. Estonian state-

owned energy company Eesti Energia has inaugurated the nation's largest battery energy storage facility at the Auvere industrial complex in Ida-Viru County.

Does Estonia have a power generation capacity?

The power generation capacity in Estonia is sufficient to cover Estonia's electricity needs in the event of a simultaneous failure of Estonia's largest power generation plant and the most powerful external connection.

What percentage of Estonia's energy supply is renewable?

According to the International Renewable Energy Agency (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavily dominated by bioenergy, which represented 93% of renewables.

Where is Estonia's first pumped-storage hydroelectric power plant located?

In August 2022, Eesti Energia announced the start of development for Estonia's first pumped-storage hydroelectric power plant (PSH). The project is located in the Estonia Mine industrial area in Ida-Virumaa and aims to become operational by 2026.

What is Estonia's Auvere Bess project?

Estonia's Auvere BESS project is designed to participate in both the electricity exchange and other energy markets to ensure the security of electricity supply. According to Eesti Energia board member Kristjan Kuhi, the battery is able to respond very effectively to fluctuations in the power system.
