

Explosion-proof location of energy storage cabinet

Overview

Why do you need an explosion proof cabinet?

In environments where water or dust could damage electronic components, a sealed enclosure is used to prevent such ingress and safely house the electrical equipment. Explosive gas or vapor mixture that accumulates within an Explosion Proof cabinet tends to give rise to dangerously high pressure.

What happens if you put explosive gas in an explosion proof cabinet?

Explosive gas or vapor mixture that accumulates within an Explosion Proof cabinet tends to give rise to dangerously high pressure. As a result, the electrical components will become heated beyond the safe limit and can potentially give rise to ignition or sparking.

Do explosion-proof cabinets require outdoor storage?

While most explosion-proof cabinets are installed indoors, some operations require outdoor storage, especially when dealing with larger volumes or limited interior space. In these cases, weather resistance, additional sealing, and elevated platforms may be necessary to prevent corrosion and environmental damage.

Which industrial facilities use explosion proof enclosures?

Places like oil refineries, feed mills, chemical plants, plastic plants and fireworks factories are a few such industrial facilities that employ explosion-proof enclosures. Their primary purpose is to protect industrial equipment and devices against internal explosions. Why Should You Use Explosion Proof Enclosures vs. Non-Explosion Proof?

.

What are explosion-proof cabinets?

That's where explosion-proof cabinets come into play. Designed specifically to

contain volatile substances and minimize the risk of ignition, explosion-proof cabinets are more than just storage—they're a frontline defense.

What are explosion-proof enclosures?

A major advantage of using explosion-proof enclosures, or "IS" cabinets by Spike Electric, is that they prevent an internal explosion or inferno from spreading to the surrounding area. Ultimately, these explosion-proof enclosures ensure the safety of the facility and more importantly the personnel working in it.
