

# **Flywheel energy storage plant in East Timor**

## Overview

---

First-generation flywheel energy-storage systems use a large steel flywheel rotating on mechanical bearings. Newer systems use carbon-fiber composite rotors that have a higher tensile strength than steel and can store much more energy for the same mass. Overview Flywheel energy storage (FES) works by accelerating a rotor ( ) to a very high speed and maintaining the energy in the system as . When energy is extracted from the system, the flywheel's r.

A typical system consists of a flywheel supported by connected to a . The flywheel and sometimes motor-generator may be enclosed in a to reduce fricti.
