Overview

How to choose a portable power station for camping?

Setting one up inside a home or workshop means close quarters, and loud models could literally require hearing protection. A portable power station for camping should also be quiet, or else it may disturb the neighbors. Typically, electric and solar power stations make for the quietest generators available.

What is the best portable power station?

The Goal Zero Yeti 1500X Portable Power Station (updated model from the 1000X we tested) remains our favorite thanks to its ample power and potential to supply even more backup power by connecting additional Yeti batteries. Not only can it power tablets, phones, and flashlights, but it also powers appliances and power tools.

Do portable power stations need a wall outlet?

Portable power stations typically come equipped with lithium-ion batteries that hold a significant amount of stored electrical energy. Most power stations plug directly into a standard electrical outlet, but many models don't require access to a wall outlet.

Can you get power outside without an outlet?

With the right portable generator, you can easily get power outside without an outlet. The first step in getting power outside without an outlet is to choose a suitable generator. Portable generators come in all shapes and sizes, so it's important to select one that meets your specific needs.

Should you buy a power brick or a portable power station?

Small power bricks have enough juice to charge your phone a few times, while a cooler-sized portable power station can keep vital electronics running during a power outage or camping trip, and the most powerful options will provide electricity to your entire house.

Which solar power station is best for off-grid camping?

The Jackery Solar Generator 1000 is a complete solar-powered portable power station package, which is why I think it's the best option for off-grid camping. I use Jackery's solar panels with my Explorer 1500, but they work just as well with this model (as a package deal).
