

# **French solar panel system subsidies**

## Overview

---

Does France offer subsidies for solar panels?

Many regions in France offer additional subsidies for solar panel installations. These initiatives can significantly lower initial costs. To qualify for government subsidies, it is recommended to hire certified professionals with the RGE (Reconnu Garant de l'Environnement) license.

Should you install solar panels in France?

Installing solar panels in France is a promising solution for reducing electricity costs and contributing to environmental sustainability. However, before starting, it is important to review legal aspects, obtain the necessary permits, and take advantage of government subsidies.

Are solar panels a good investment in France?

As electricity prices continue to soar in France - up 60% in four years - more people are turning towards solar panel kits, which promise to help users save on energy costs and installation prices. The estimated extra cost of electricity in 2024, compared to 2020, is €540 per household per year.

Does France offer interest-free loans for solar panels?

In some cases, the installation may be prohibited or require specific solutions to minimize visual impact. France offers an interest-free loan (Eco-PTZ) to finance solar panel installation projects. This measure helps homeowners reduce financial burdens without paying interest.

How does VAT affect solar panels in France?

This helps accelerate the return on investment in solar panels. A reduced VAT rate of 10% instead of the standard 20% applies to solar panel installations in France. This measure is available for residential properties used as primary homes. Many regions in France offer additional subsidies for solar panel installations.

Have French subsidies been effective?

French subsidies have been effective. From 2006 to 2009, new PV solar panels installed in the country increased significantly from 8 MW to 285 MW, with 100 MW still pending approval to be connected to the grid. Despite an increase in overall electricity consumption from 478 TWh to 486 TWh during the same period, the growth in solar panel capacity is a clear indicator of the subsidies' success.
