

General installation cost of EMS for communication base stations

Overview

What are the technical requirements for in-building emergency radio communication enhancement systems?

The technical requirements for design, installation, commissioning, inspection, testing, and maintenance of in-building emergency radio communication enhancement systems included in the IFC, NFPA 1, and NFPA 1221 are summarized as follows: Typical system operation is continuous or automatic.

Does NFPA 1 cover emergency radio communication enhancement systems?

The NFPA 1 model Fire Code also added very similar requirements covering in-building emergency radio communication enhancement systems in the 2012 edition, Section 11.10 (Two-Way Radio Communication Enhancement Systems).

What is an emergency radio communication enhancement system?

Properly designed, installed, and maintained in-building emergency radio communication enhancement systems provide a cost-effective and reliable tool for firefighter communications during fire or other emergencies within our built environment.

What is an in-building emergency responder Communications Enhancement System (Erces)?

An In-Building Emergency Responder Communications Enhancement System (ERCES) is a wireless communications system used by first responder and emergency services personnel, such as police, fire, emergency medical, homeland security, and disaster response agencies.

Does New York City require an auxiliary radio communication system?

Other jurisdictions, such as New York City, have their own local code requirements for these systems. As of December 31, 2014, Sections 403.4.4 and 907.2.13.2 of the New York City Building Code (NYCBC) require that an in-

building auxiliary radio communication (ARC) system be installed and maintained in all newly constructed high-rise buildings.

Where can a radiating cable system be installed?

Radiating cable systems can be installed in new or existing buildings to enhance emergency two-way radio capability. Since this cable comes in multiple lengths and is flexible, this antenna system can be installed in mechanical shafts, stairways, or corridors within a building to provide RF coverage throughout the facility.
