

# **Grid-connected inverters require government approval**

## Overview

---

Do solar inverters need to be connected if a grid is unstable?

Old grid connection standards, perhaps influenced by skeptical grid operators, mandated that wind and solar inverters needed to disconnect from the grid if it became unstable. Enter: UL1741, a set of the latest grid connection standards that mandate new inverters stay connected and help out.

Do solar inverters need to be disconnected from the grid?

With the ever-growing penetration of green energy, solar, and wind power inverters, grid connection standards needed an update. Old grid connection standards, perhaps influenced by skeptical grid operators, mandated that wind and solar inverters needed to disconnect from the grid if it became unstable.

What is the grid support inverter list?

The Grid Support Inverter List includes information for solar and battery inverters. Different definitions of “smart inverter” exist depending on the utility, authority having jurisdiction (AHJ), or other responsible entity.

Why do we need new grid reliability standards?

As more IBRs connect to the grid, new grid reliability standards need to be developed to help ensure that the IBR technologies and their impacts to the grid are understood and accepted by the IBR facility operators, equipment manufacturers, and utilities.

How do UL1741 inverters support the grid?

Now, UL1741 inverters support the grid by staying connected for longer periods of time after a slight change in voltage. If a voltage or frequency change occurs on the grid, the inverter must ride-through that instability event.

Are PV systems interconnected to the grid?

While the number of PV systems interconnected to the grid has increased significantly over the last decade, only recently have PV systems been installed in major metropolitan areas and tied to electric distribution secondary network systems (networks).

## Grid-connected inverters require government approval

---

### **Regulatory Protection and Control Standards Applicable to ...**

Purpose: Sets requirements that cover inverters, converters, charge controllers, and interconnection system equipment (ISE) intended for use in stand-alone (not grid-connected) ...

[Product Information](#)

### **Essential Grid Reliability Standards for Inverter-Based Resources**

These standards will impact the design, manufacture, testing, and certification of equipment, as well as their performance, interconnection, and operation in the nation's power grid.

[Product Information](#)

### [Phase-II Of The Grid Connected Rooftop Solar Programme](#)

Phase-II of the Grid Connected Rooftop Solar Programme, is introduced by Ministry of New & Renewable Energy (MNRE), Government of India with Jammu & Kashmir Energy ...
