

# **How many kilowatt-hours of electricity can an outdoor power supply hold**

## Overview

---

How many kWh should a 10 kWh battery have?

For a 10 kWh battery, you'll want to leave at least 1 kWh of capacity in reserve at all times. That leaves you with 9 kWh of battery capacity to power your home during a grid outage. Related reading: [The 8 Best Solar Batteries \(and How to Choose the Right One For You\)](#).

How long can a battery power a house during a power outage?

Capacity — the amount of energy a battery can store — is one of the main features that influence how long a battery can power a house during a power outage. Battery capacity is measured in kilowatt-hours (kWh) and can vary from as little as 1 kWh to 18 kWh.

How many kilowatt-hours can a battery store?

This means the battery can store 1.2 kilowatt-hours of energy. Example: The battery can deliver 1.2 kWh of energy before being discharged. This calculation is vital for assessing how long your battery will last under certain conditions, whether you're powering a device or running an entire system.

How long does a 10 kWh battery last?

Without running AC or electric heat, a 10 kWh battery alone can power the critical electrical systems in an average house for at least 24 hours, and longer with careful budgeting. When paired with solar panels, battery storage can power more electrical systems and provide backup electricity for even longer.

How much electricity does a Tesla Powerwall use a day?

For this calculation, we used the U.S. average daily household electricity use of 29 kilowatt-hours (kWh). Since the Tesla Powerwall has an energy capacity of 13.5 kWh, we divide 13.5 by 29, which gives us 0.466 days. Multiply that by 24 hours in a day to get 11.04 hours—or roughly 11 hours and 10 minutes.

What is battery kWh?

Battery kWh (kilowatt-hour) is a unit of energy that indicates how much power a battery can store and deliver over time. To put it simply, 1 kWh is equivalent to the energy required to run a 1,000-watt device for one hour.
