Overview

How to choose a power inverter?

Second, select an inverter. For this example, you will need a power inverter capable of handling 4500 watts. The continuous power requirement is actually 2250 but when sizing an inverter, you have to plan for the start up so the inverter can handle it. Third, you need to decide how long you want to run 2250 watts.

How much power does an inverter need?

The continuous power requirement is actually 2250 but when sizing an inverter, you have to plan for the start up so the inverter can handle it. Third, you need to decide how long you want to run 2250 watts. Let's say you would like to power these items for an eight-hour period.

How much power does a 12V inverter use?

For example: If you're running a 1500W inverter on your 12v battery with 1000 watts of total AC load. So your inverter will be consuming 83 amps ($\text{amps} = \text{watts} / \text{battery volts}$) from the battery for which you'll need a very thick cable. using a thin cable in this scenario can damage the inverter or you'll not be able to run your load.

How many watts in a 12 volt battery?

So if you have a 12v 100Ah lithium battery you can use all 1200 watts of power but if you have a lead-acid type then make it half (600 watts) Related Post: [Amps To Watts Calculator: How Many Watts In A 12-volt Battery?](#)
