SolarMicrogrid Solutions

How much does it cost to install photovoltaic panels on Israeli roofs

Overview

The installation cost of photovoltaic panels in Israel can vary between €6,500 and €30,000, depending on the system size, type of panels chosen, and associated installation costs. This amount can be a barrier for many households and businesses looking to adopt this solution.Why do Israelis install solar panels on roofs?

This stems from the advantages that the Ministry of Energy sees in installing solar panels on roofs, including energy efficiency (sometimes there is no need to transfer the electricity to high voltage), decentralization of energy production, and meeting Israel's renewable energy goals.

Can a solar power plant be installed on a roof in Israel?

In order to meet Israel's goal of increasing the production rate of green energy to 30% within a decade, the State is promoting legislation that allows owners of private homes and commercial buildings to set up a solar power plant on the roof.

Are solar panels profitable in Israel?

While the system can bring a double-digit return on investment for some, for the hundreds of thousands who own apartments in shared buildings, it is not yet profitable. Over the past few years, it has become more and more popular for homeowners in Israel to set up solar panels on their roofs or in their yards — and for good reason.

How much does it cost to install a solar energy system?

In general, it should cost between sixty and a hundred thousand shekels to install a solar energy system on a residential home, depending on a number of variables, the main one being the size of the system. In order for the project to be cost-effective, it is recommended to set up solar panels in an area of at least 50 square meters.

Should Israel use solar panels?

Another advantage to expanding the use of solar panels is that it reduces Israel's dependence on oil-produced energy, which in today's world affords great power to a fairly small number of countries, most of which are characterized by problematic regimes, to say the least.

How much do solar panels cost per kWh?

Anyone who installs solar panels on the roof of their home today is entitled to an especially high tariff of NIS 0.48 per kWh, and an additional NIS 0.06 in large cities, locked in for 25-years. This rate is several times higher than that received by new power plants and solar energy fields.
