

# **How to choose a high voltage inverter**

## Overview

---

When you choose a power inverter, you need to consider comprehensively the following points power, voltage, wave form, efficiency, protection function, heat radiation, brand and budget, so that the power inverter can meet your specific demands. How do I choose the best inverter?

Power output is usually the main factor, but there are many others. There are many factors that go into selecting the best inverter (and options) for your application, especially when you get into the higher power ranges (800 watts or more).

How much power does an inverter use?

Average power would usually be much less than typical or surge and is not usually a factor in choosing an inverter. If you run a pump for 20 minutes and a small TV for 20 minutes during a one hour period, the average might be only 300 watts, even though the pump requires 2000. Average power is only useful in estimating battery capacity needed.

How to find the right inverter power?

To find the right inverter power, calculate the total wattage of all the appliances you want to run during an outage. Tip: Always add 20-25% as a safety margin. So,  $595W \times 1.25 = \text{approx. } 750W$  inverter needed. 3. Choose the Inverter Type There are mainly two types of inverters:.

What are the different types of inverters?

There are mainly two types of inverters: Recommendation: For home use, especially if you want to power electronics, go with a pure sine wave inverter. 4. Select the Right Inverter Capacity (VA Rating) Inverter capacity is often measured in VA (Volt-Ampere), not just watts.

How do I know if my inverter is good?

Inverter capacity is often measured in VA (Volt-Ampere), not just watts. Since

inverters are not 100% efficient, consider their power factor (usually around 0.7–0.8 for home inverters). 5. Match with the Right Battery Size The inverter alone can't run without a battery.

Which inverter has the highest surge rating?

This includes most inverters made by Statpower, Coteck, Exeltech, Power to Go, Phocos, Sol-Ark and nearly all the inexpensive inverters in the 50 to 5000-watt range. The highest surge ratings are the transformer based, low-frequency switchers. This includes most Schneider, Xantrex, Magnum, Victron Energy and Outback Power.
