

Huawei inverter grid-connected power limit

Overview

If a single inverter is connected to the power grid, a Smart Dongle must be used for networking. On the home screen, choose Power adjustment > Feed-in at limited current. The default value is Disable. If this parameter is set to Disable, feed-in at limited current will be unavailable. Can the inverter be extended with the Huawei battery?

Thanks to the integrated 800V high-voltage battery connection, the inverter can be extended with the HUAWEI Battery. The optional HUAWEI Smart Meter is connected via the integrated RS485 interface and provides information about house consumption and grid feed-in.

What is a Huawei inverter?

Huawei inverters are becoming a benchmark for solar energy in residential and commercial applications. Huawei is a well-known brand in the solar energy sector.

How to set a grid connection with limited power (kW)?

Set grid connection with limited power (kW) parameters and click Submit. Set this parameter to Grid connection with limited power (kW). Set this parameter to Smart meter. Otherwise, the function will not take effect. When the inverter has no output power, set this parameter to Positive if the active power reading of the power meter is positive.

How to enable grid connection with limited power parameters?

To enable this function, you need to set power meter, inverter, and grid connection with limited power parameters. This section describes how to set grid connection with limited power parameters. Before setting the parameters, ensure that a power meter has been connected to the SmartLogger.

How do I export rated power to the power grid?

The inverter can export its rated power to the power grid. Set this parameter

to SDongle/SmartLogger when the SmartLogger1000A is connected. If multiple inverters are cascaded, set this parameter to SDongle/SmartLogger. If there is only one inverter, set this parameter to Inverter.

What if the inverter has no output power?

When the inverter has no output power, set this parameter to Positive if the active power reading of the power meter is positive. Otherwise, set this parameter to Reverse. Total power: controls the total power at the grid-tied point to limit the power fed to the power grid.

Huawei inverter grid-connected power limit

Detailed explanation of Huawei photovoltaic inverter parameters

This document provides information about the ModBus protocol used in Huawei inverters, and can be used to regulate and restrict follow-up third-party integration R&D and customizations.

[Product Information](#)

Grid-tied Point Control

Many regions impose a limit on the feed-in power of a power generation system. Therefore, a power meter is required to measure the power at the grid-tied point to control the output of the ...

[Product Information](#)

The SUN2000-40KTL displays power limit for grid-tied inverters

According to onsite feedback, the inverter AC and DC input voltage is normal, but the output power of the same PV array is less than 1 kW and the status is On-grid: Power limit.

[Product Information](#)

[\(Optional\) Setting Limited Feed-in Parameters](#)

Function Description If surplus PV energy is fed to the grid, the limited feed-in parameters can be set to ensure that the feed-in power is within the range specified by the grid company.
