

# **Indonesia Battery Energy Storage Fee Adjustment**

## Overview

---

Why is battery energy storage system important in Indonesia?

However, given the challenge of Indonesia's geological landscape, with many off-grid and remote areas, there is growing intermittency issue that hamper the development of solar and wind generation. Hence, the battery energy storage system (BESS) technologies have a critical role in the development of Indonesia's renewable energy.

What is the minimum battery production capacity in Indonesia?

minimum battery production capacity of approximately 36.8 GWh to meet its EV targets. Currently, the country has only 10 GWh of NMC battery cell capacity (from PT HLI Green Power) and 100 MWh of LFP battery cells (from PT Gotion Green Energy Solutions Indone.

How EV batteries can be used in off-grid areas in Indonesia?

Using battery storage with solar PV can help off-grid regions reduce diesel use, lower emissions, and create a sustainable energy solution. The growing adoption of electric vehicles (EVs) in Indonesia also further boosts the demand for BESS, which enhances EV charging infrastructure and repurposes EV batteries for secondary use.

What is battery & energy storage Indonesia 2026?

Battery & Energy Storage Indonesia 2026 is intended to be the ideal platform to get up close with the latest advancements in battery and energy storage solutions, gain valuable knowledge from leading experts, expand business network, and find the latest information in the relevant industries.

Does Indonesia need a battery?

energy (VRE) sources such as solar and wind, ensuring grid stability and reliability. However, despite Indonesia's wealth of mineral resources, a clear mismatch remains between current battery production capacity and projected

national demand. For example, assuming the average 4W electric SUV requires a 39 kWh battery<sup>4</sup>, Indonesia would need a.

Why are EV batteries becoming more popular in Indonesia?

The growing adoption of electric vehicles (EVs) in Indonesia also further boosts the demand for BESS, which enhances EV charging infrastructure and repurposes EV batteries for secondary use. Moreover, Indonesia's leadership in nickel reserves, a key material for lithium-ion batteries, positions it as a global player in battery manufacturing.
