

Indoor connection to outdoor power supply

Overview

The quickest way to extend power outdoors is to install a receptacle back-to-back with one inside the house. You also can drill through the wall from a basement or crawlspace and attach a receptacle on the side of a house using an extension ring.

Find the easiest path for cable to reach an outside wall, perhaps through a basement or crawlspace. Use a long drill bit to drill a locator hole. If the location is inconvenient or does not satisfy code, install an LB fitting rather than a receptacle to run power elsewhere.

Shut off power to the circuit. Connect the black and white wires from the power source to the LINE terminals of a GFCI receptacle. After you.

Using a reciprocating saw or keyhole saw, cut a hole for a remodel box. Run cable through the hole and into a remodel box. Install the box and add an extension ring and a terminal.

Beneath the box dig a trench deep enough to satisfy local codes. Call before you dig. Using PVC or rigid metal conduit, attach a length of pipe to a sweep. Cut the pipe to fit, attach it.

The quickest way to extend power outdoors is to install a receptacle back-to-back with one inside the house. You also can drill through the wall from a basement or crawlspace and attach a receptacle on the side of a house using an extension ring.
