

# **Is the voltage of several tens of volts on photovoltaic panels normal**

## Overview

---

How many volts does a solar panel produce?

Open circuit 20.88V voltage is the voltage that comes directly from the 36-cell solar panel. When we are asking how many volts do solar panels produce, we usually have this voltage in mind. For maximum power voltage ( $V_{mp}$ ), you can read a good explanation of what it is on the PV Education website.

Is there a fixed voltage for a solar panel?

Therefore, there is no fixed value. It depends on the connected load and current solar irradiance. The voltage at which the solar panel is designed to operate is known as nominal voltage. It is 12V or 24V. The voltage of a solar panel mainly depends on the solar panel type, size, cells, etc.

Do solar panels produce a higher voltage than nominal voltage?

As we can see, solar panels produce a significantly higher voltage (VOC) than the nominal voltage. The actually solar panel output voltage also changes with the sunlight the solar panels are exposed to.

How to calculate solar panel output voltage?

If you know the number of PV cells in a solar panel, you can, by using 0.58V per PV cell voltage, calculate the total solar panel output voltage for a 36-cell panel, for example. You only need to sum up all the voltages of the individual photovoltaic cells (since they are wired in series, instead of wires in parallel). Here is this calculation:.

What is a solar panel nominal voltage?

Nominal voltage is an approximate solar panel voltage that can help you match equipment. The voltage is usually based on the nominal voltages of appliances connected to the solar panel, including but not limited to inverters, batteries, charge controllers, loads, and other solar panels.

What are the different types of solar panel voltages?

There are three types of solar panel voltages. The voltage that is recorded when there is no load connected to the solar panel is called Open Circuit Voltage. The circuit is open as there is no load, so there is no flow of current. A multimeter is connected at the terminals of the solar panel directly without having a load.
