

# Italian solar power system

## Overview

---

Solar power is an important contributor to electricity generation in Italy, accounting for 12.3% of total generation in 2023, and with a total installed capacity of 36.01 GW. As of 2023, government plans are targeting solar PV capacity to rise to 79 GW by 2030. Like most countries, solar power usage in Italy was.

The entire nation of Italy retains high potential for solar energy production, ranging from 3.6 kWh per square meter per day in the Po.

Government targets for (RES) and different support schemes, especially for solar photovoltaics.

Italy has long sought to develop renewable energy resources due to having few domestic fossil fuel resources. Around 1850 wood, .

Installed capacity Installed capacity in Italy was less than 100 MW before 2008. Growth accelerated during 2008 and 2009 to reach over 1,000 MW installed.

Italy currently maintains various (CSP) projects. Concentrated solar power plants concentrate solar.
