

# Lithium battery storage costs in Romania

## Overview

---

Storage systems represent one of the key solutions for improving the reliability of electricity networks as there is an increase of intermittent electricity generated especially by photovoltaic (PV) systems. The cos.

Are there commercially available batteries on Romanian market?

The analysis presents the commercially available batteries on Romanian market, the technical performances of each battery, the costs involved in this decision, the opportunity to reduce their investment and indicates the most profitable battery obtained after LCOS method is performed.

How much does a lithium-ion battery storage system cost?

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. For utility operators and project developers, these economics reshape the fundamental calculations of grid stabilization and peak demand management.

Are battery technologies profitable in Romania?

Profitability evaluation for 5 types of battery technologies in Romania. BESSs costs were obtained from Romanian market analysis. LCB technologies are the most feasible from the examined BESSs. A sensitivity analysis with respect to cost parameters is presented. The variation of capital expenditure has the highest influence on LCOS values.

How much LCoS does a battery cost in Romania?

To be considered profitable, the LCOS of the battery must be less or equal to electricity unit price paid by the customer. The electricity price considered for Romania is 0.1734 €/kWh, which is the average price in the first quarter of 2021, according to EU statistics .

How much does a lithium ion battery cost?

In the European market, lithium-ion batteries currently range from €200 to

€300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves. Power conversion systems, including inverters and transformers, represent approximately 15-20% of the total investment.

How much does battery storage cost?

The largest component of utility-scale battery storage costs lies in the battery cells themselves, typically accounting for 30-40% of total system costs. In the European market, lithium-ion batteries currently range from €200 to €300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves.

## Lithium battery storage costs in Romania

---
