

# **Mongolia s first hybrid energy 5G base station**

## Overview

---

Does Mongolia have a 5G network?

Unitel Group, identified as Mongolia's largest data network provider, is already activating 5G base stations in these regions. Regulatory approvals permit operators to extend deployment in phases, addressing Mongolia's unique geographic challenges.

Does a 5G base station use hybrid energy?

In this paper, hybrid energy utilization was studied for the base station in a 5G network. To minimize AC power usage from the hybrid energy system and minimize solar energy waste, a Markov decision process (MDP) model was proposed for packet transmission in two practical scenarios.

Will Mongolia reach 70% 5G coverage by 2027?

Mongolia aims to reach 70% 5G population coverage by 2027. The TRC and relevant ministries will oversee progress and ensure operators meet technical and coverage benchmarks, forming a critical part of the nation's digital transformation agenda.

Is there a trade-off between a 5G base station and MDP?

In addition, none of the previous works linked practical transmission scenarios for the MDP model with the study of trade-off among three elements: the minimum dropped packet ratio, the minimum the wastage of solar energy harvesting (SEH), and the minimum AC power utilization was achieved for a 5G base station using the proposed MDP method.
