

Netherlands 90MW photovoltaic energy storage power station

Overview

Solar power in the Netherlands has an installed capacity of around 23,904 megawatt (MW) of photovoltaics as of the end of 2023. Around 4,304 MW of new capacity was installed during 2023. Market research firm GlobalData projects Dutch solar PV capacity could rise to 55,000 MW (55 GW) by 2035. Longer-term projections from the Netherlands Organisation for Applied Scientific Research (TNO) of 33 euro cents per kWh were introduced but initially failed to attract much development. However, when they were curtailed, the Dutch banded together to make large purchases at discount instead. .

Nearly 80% of solar power installed in the Netherlands in 2017 was for small systems of less than 10 kW, a large part being rooftop Solar PV. Larger systems over 500 kW accounted for just 6.9% of the total. By the end of.
