

Netherlands Energy Storage Photovoltaic Requirements

Overview

Should building-integrated PV be mandated in the Netherlands?

While there is an energy label in place for buildings in general and measures exist to reduce the dependency on natural gas in the build environment, there are no policies in place to incentivize or mandate building-integrated PV in the Netherlands.

Can photovoltaics be used in the Netherlands?

Overall, photovoltaics in the Netherlands is on a promising path but also faces significant challenges. The combination of technological progress, sustainable practices, and a clear focus on long-term goals will be crucial to fully utilise the potential of solar energy while taking environmental and social concerns into account.

What are the laws & regulations on energy storage in the Netherlands?

No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation.

What are the future prospects for solar PV in the Netherlands?

Cederik Engel, Managing Director of CCE The Netherlands and Head of ESG at CCE Holding, sees strong prospects ahead. The Netherlands leads the EU in per-capita solar PV capacity, having added around three gigawatts annually over the past three years.

Why is energy storage important in the Netherlands?

Energy storage can play a key role in contributing to solutions for shortages of capacity on the grid. It is therefore no surprise that we have seen the appetite for large-scale battery energy storage systems growing in the Netherlands.

Is there a roadmap for energy storage in the Netherlands?

In the Netherlands, there has also historically not been a roadmap or detailed industrial strategy with supportive legislation, policy, taxation reliefs, or investment incentives for the energy storage market.

Netherlands Energy Storage Photovoltaic Requirements

Solar power in the Netherlands

Solar power in the Netherlands has an installed capacity of around 23,904 megawatt (MW) of photovoltaics as of the end of 2023. Around 4,304 MW of new capacity was installed during 2023.
