

# **Netherlands standards for outdoor power supplies**

## Overview

---

Netherlands uses Type C/F electrical outlets with standard voltage of 230V and 50Hz frequency. If your device plugs don't match Netherlands's standards, we recommend purchasing suitable travel adapters in advance to ensure proper use. What power plug types are used in Netherlands?

What type of plug is used in the Netherlands?

In the Netherlands, types C and F are the official standards. Like almost all Continental European countries, the Netherlands has standardized on the German plug and socket system. What is the mains voltage in the Netherlands?

Just like the rest of Europe, the voltage in the Netherlands is 230 volts and the frequency is 50 Hz.

What is the voltage in the Netherlands?

Just like the rest of Europe, the voltage in the Netherlands is 230 volts and the frequency is 50 Hz. The Netherlands has standardized on type F sockets and plugs. Type C and type E plugs can also be used thanks to their compatibility with type F sockets.

How much electricity does the Netherlands use?

According to the IEA, the total electricity use (gross production + imports + exports + transmission/distribution losses) in the Netherlands in 2008, was 119 TWh. In 2014, electricity use had decreased to 113 TWh. The total electricity consumption in 2021 had risen again to 117 terawatt-hours (TWh).

What type of socket does the Netherlands use?

Like almost all Continental European countries, the Netherlands has standardized on the German plug and socket system. What is the mains voltage in the Netherlands?

Just like the rest of Europe, the voltage in the Netherlands is 230 volts and the frequency is 50 Hz. The Netherlands has standardized on type F sockets and plugs.

Are plug sockets allowed in the Netherlands?

Typically, type C plug sockets are not allowed to be installed in the Netherlands: these outlets are not earthed and are therefore considered dangerous. Only type F power points are permitted because they are grounded and therefore significantly safer.

How much electricity does the Netherlands use in 2021?

The total electricity consumption of the Netherlands in 2021 was 117 terawatt-hours (TWh). The consumption grew from 7 TWh in 1950 by an average of 4.5% per year. In 2021, fossil fuels, such as natural gas and coal, accounted for around 62% of the total electricity produced.
